

HCI HANDS-ON 3: GAME STORYBOARD USING FIGMA

MARC RODEN D. FAMERO

BSIT 1-3

HUMAN-COMPUTER INTERACTION

The Philippine Prime Minister plans to forcibly increase the Intelligence Quotient of the youth in the Philippines. To achieve this, he combines advanced technologies such as Artificial Intelligence, Virtual Reality, Augmented Reality, and Holograms. His objective is to create an environment where intelligent and strategic students compete against one another in order to push their cognitive abilities beyond normal limits.

The setting of his experiment is The Pamantasan. Inside the university, a large-scale Culling Game is launched where selected students are required to participate. The Prime Minister believes that through extreme competition and survival-based challenges, the students' intelligence will evolve to a higher level. However, the process is unethical and dangerous. If the project succeeds, it could result in chaos and the loss of thousands or even millions of lives.

To prevent this plan from becoming a national disaster, Andrei and his friends decide to enter the Culling Game themselves. Instead of fighting only for survival, they aim to outsmart the Prime Minister and expose the truth behind his experiment.

SYSTEM ACTIVATION

PANTAS: CULLING GAMES

The campus is divided into labeled zones: GEE, GV, GCA, GB, UAC, GL, Field. The player moves a cursor to choose a colony.

THE RED MARKED COLONY HAS THE HIGHEST POINTS

Player Value
Each student and faculty member is worth 5 points. Each outsider is worth 1 point. Points are gained upon elimination.

Game Master Authority
The Game Master must implement valid new rules that do not weaken the system.

Rule Addition Privilege

A player who reaches 100 points may propose one new rule. The rule must not disrupt the game. Existing rules cannot be removed.

Inactivity Penalty

If a player's score does not change for 6 to 7 days, their consciousness and IQ are erased, resulting in death.

EARNING POINTS

Points are earned by defeating and eliminating other players through intelligence and strategy.

INSIDE PAMANTASAN

Declaration of Participation

Anyone who awakens their inner intelligence must declare participation within 20 hours and choose a colony: GEE, GV, GCA, GB, UAC, GL, Tanghalan or the Field.

Refusal Penalty - Failure to declare participation results in loss of consciousness and eventual death. Individuals with zero IQ are exempt.

参加拒否のペナルティ

参加を申告しなかった場合、意識を失い、最終的には死亡に至ります。IQが0の人は除外されます。

Automatic Registration

Non-players who enter the Pamantasan and a colony automatically become players. Those inside a barrier before the game begins may leave once. Staying or re-entering confirms participation.

自動登録

内なる知性を目覚めさせた者は、20時間以内に参加を宣言し、GEE、GV、GCA、GB、UAC、GL、タンガラン、またはフィールドのいずれかのコロニーを選択してください。

POINTS 1133A
98 → 99 → 99 → 100
After reaching 100 points, the environment pauses. The Game Master descends from above. The Game Master sprite appears. The player can input a new rule.
